Pressure Vessel stock now available in the Middle East

Masteel UK Limited has already added and subsequently increased its stockholding in Singapore. As part of a conscious move to better serve their clients, the company is now holding stock of pressure vessel and boiler quality material at Jebel Ali in the United Arab Emirates.

The move represents further expansion of the company's global supply chain and is in direct response to consumer demand in the region. Masteel currently holds stock in the UK, Singapore and Antwerp and the decision is further evidence of the business's rise in stature as a major steel supplier to the Oil and Gas industry in Arabic countries.

Tennyson Valentine, Business Manager for **Masteel Middle East** based in Sharjah states that

"Masteel as a business has always been traditionally strong in the Middle East and it is therefore a natural progression to stock material for our established client base. Having pre-tested and readily accessible material will enable us to offer improved lead times to our customers. With additional support from our UK based stockholding and quick mill rollings as part of our worldwide delivery program, this move can only result in better serving our customers with the same high quality product but with an even faster turnaround."

Middle East Stock Range

- ASTM A / ASME SA516 Grade 70
- ASTM A / ASME SA516 Grade 60
